Michael

Senior

Pure Mathematics & Statistics

I took Stat 134 last semester and I am now taking Stat 135.

I took 4 computer science courses at a community college: Intermediate and Advanced Java, C++, and Assembly Language. I also took the self-paced Python course at Berkeley last semester. I have done a lot of programming on my own. Most recently, I learned Sage and used it heavily in a program I participated this past summer. I love programming and am very excited about the topics you listed in the first announcement you sent us before the semester began.

Yes, a Macbook Pro. I intend to bring it to class.

Mac, but I do use the Unix shell for some tasks.

I can't wait to learn about data scraping.

I play fantasy baseball religiously. I would really appreciate it if you could take 5-6 weeks to teach us how to use R effectively in order to win at fantasy baseball. I realize this is a large commitment of valuable lecture time, but I believe it would pay great dividends for those of us who are studying statistics solely for the purpose of winning at fantasy baseball. (This is a joke, but I really do love fantasy baseball. I think it sparked my interest in statistics.)

I played zero hours of video games last week, unfortunately. Wait, does R count as video games? I feel like it does...
